## Service Offering

**Title: Cryo-Transmission Electron Microscopy (Cryo-TEM) and Particle Sizing for Lipid (Including Exosomes), Polymeric and Inorganic Nanoparticles (Size, Shape and Morphological Characterization)**

### Company:

Nanogenius Laboratories Inc.

### Description

Cryo-TEM for characterization of purified exosomes and aqueous dispersions or suspensions of lipid-based, polymer-based, lipid/polymer hybrids and inorganic nanoparticles. Particle sizing of nanoparticles from nm to micron range. Can also be used to measure protein aggregates.

### Equipment

FEI Tecnai G2 200kV Transmission Electron Microscope. Malvern Zetasizer nanoparticle sizer.

### Rates

Competitive Rates. Please contact.
